

Cooled ventilation in school

Albeda College

The Albeda College is a large school for professional training and adult education in Rotterdam, The Netherlands. The Albeda College has chosen for an energy saving system which is able to cool and heat. The system is equipped with a high efficient heat recovery unit in combination with a StatiqCooling air cooler. Besides energy efficiency the system also offers the school the advantage of ventilation with comfortably heated or cooled fresh air. Because of this the CO2 level in class rooms drops and an environment is created in which students remain more alert.

The Albeda College found a solution for cooled ventilation by installing the StatiqCooler:

- Control of the temperature on warm days
- Ventilation with fresh outside air
- Low energy consumption
- Acceptable burden on the environment

“For the location of the Albeda college in the Stolwijkstraat in Rotterdam we have been looking for a system which can heat and cool the classrooms efficiently. The air handling unit equipped with a StatiqCooler offers this possibility in an environmentally friendly way.”

Mrs. Els van der Kooij, Location manager, Albeda College, Rotterdam, the Netherlands
