

Cooled ventilation in an office

Gerbri Plastics BV

Gerbri Plastics BV was one of the first companies with a StatiqCooling system. The system cools the 8.000 square feet two floor office section of the plastics trading company. At first the air distribution between the upper and lower floor lead to the workplaces became too cold to work in the lower floor because the lower floor not located directly under the roof in contrast to the upper floor. After an adjustment of the air distribution both floor have a pleasant and fresh working climate.

Gerbri Plastics BV created a pleasant work environment in the office:

- Control of the temperature on warm days against acceptable energy consumption
- Low impact on the environment
- Increase of the employees productivity

“In the beginning the StatiqCooler provided too much cold air in the offices, particularly on the first floor. By improvement of the control and adjustment of the air distribution system we have created a comfortable working environment for all office staff.”

Mr. Gerwin Gerritsen, Managing director, Gerbri Plastics BV
